- II baby and toddler side

(FOOTREST)

- ✘ COVER: cotton – polyester fabric / Design Leander
- ✘ CORE: cold foam with vertical air channels

Comfort +7 & Premium +7 in comparison

Differences	Comfort +7	Premium +7
foam	cold foam	Cellflex foam with surface contour cuts on both sides
cover	Sleep Safety cover / Design Leander	Sleep Safety cover /Design Leander quilted with 3D air cushion layer and special breathable venting material on the side of the cover
ventilation through:	vertical air channels	3D air cushion layer which is quilted in the cover

Cold foam:

Cold foam is made of higher-quality raw materials than soft foam. The benefits of cold foam are a good point-by-point elasticity, improved breathability and a longer life.

Cellflex foam:

Cellflex is ultra-high-quality foam that is a further evolution of cold foam. It has a very open-pored cell structure, high breathability and point-by-point elasticity.

3D air cushion layer:

Countless individual polyester fibres give the 3D spacer fabric unparalleled breathability and point-by-point elasticity. With this material your baby can breathe freely and will not sweat.

Sleep Safety Cover:

39% Lyocell (TENCEL®), 61% polyester, quilted with 100% wash-fleece

The unique mattress cover has an integrated wetness protection and is highly breathable. The cover is refined with lavender & Melissa oil essences which are known for their sleep – promotion, calming and relaxing effects. Lavender & Melissa oils are effective against bacteria and fungi too.

TENCEL® fibres absorb the moisture and guarantee a healthier and drier sleeping climate.

TENCEL® combines the benefits of many fibres:

- ⊗ as strong as silk
- ⊗ as strong as polyester
- ⊗ as easy to maintain as acrylic
- ⊗ cool and pleasant like linen
- ⊗ as warm as wool
- ⊗ silky, comfortable hand

In addition, TENCEL® absorbs 130% more water vapour than cotton and releases moisture quickly again. The result is a dry, healthy sleeping environment.

Baby & Toddler side:

The mattress core has two different sleeping surfaces: a baby side and a toddler side, to provide optimum comfort and support for each stage of baby's development. We recommend turning the mattress to the toddler side when your child weighs 12 kilograms or more.
